08 March 2010

### **FibreSpan Connects to Interxion's City Data Centre**

FibreSpan, a network carrier specialising in dark fibre and ultra-high bandwidth services, and Interxion, a leading European operator of carrier-neutral data centres, has jointly announced that FibreSpan has successfully connected its network to Interxion's City data centre.

The addition of FibreSpan's dedicated dark fibre network to Interxion's London City data centre means that FibreSpan customers are now able to locate their mission-critical systems in one of the most desirable collocation facilities in the UK. Expanding its local portfolio of carriers to 32, with the addition of the FibreSpan network, Interxion's customers now have an even wider range of connectivity options.

Interxion's data centre, located in the heart of the city, offers some of the lowest latency on the market and provides a highly secure physical location with advanced infrastructure for mission-critical applications. High-density power configurations from 5 kW up to 30 kW are available as standard, with industry-leading service levels and availability, and 24x7 secure access to equipment.

"Interxion's central city location was a critical factor in our decision-making process because everything we do is focused on low latency", said Robert Bicket – FibreSpan's Chief Executive Officer. "All our customers look to us to provide them with the lowest latency possible, so we always ensure our networks do just that."

“FibreSpan is another excellent example of the successful execution of our segment strategy which focuses on bringing together communities of interest that can benefit from close proximity to one another,” said Kevin Dean, Chief Marketing Officer Interxion. “With the addition of FibreSpan to our roster of connectivity partners, we are particularly excited about being able to enhance the low-latency connectivity options available to financial services and digital media customers,” concludes Dean.

#### About FibreSpan

FibreSpan is a network carrier specialising in dark fibre and ultra-high bandwidth services.

Established in 2001, FibreSpan designs, installs, operates and leases private dark fibre circuits, working with public sector, corporate and financial services organisations throughout the UK.

FibreSpan builds high bandwidth low latency private fibre networks that put you in control, providing flexibility in managing IT across multiple sites or offices.

FibreSpan offers an end-to-end service that includes consultation, network planning, rapid deployment and comprehensive support. Its bespoke fibre networks offer scalable bandwidth at a fixed cost for the term of the contract – a genuinely future-proof solution.

FibreSpan is an ISO 9001 accredited national telecommunications company (with code powers) licensed by the DTI and regulated by Ofcom.

#### About Interxion

Interxion is a leading European operator of carrier-neutral data centres. Headquartered in Schiphol-Rijk, The Netherlands, Interxion serves its customers from 26 carrier-neutral data centres located in 13 cities across 11 European countries. Interxion serves network and carrier-based, hosting and enterprise customers who require professionally managed and strictly controlled physical environments within which to operate mission-critical applications and computer systems. Interxion’s data centres offer cost-effective and fast access to multiple local and global communication networks. For more information please visit [www.interxion.com](http://www.interxion.com)
