

## NEWS RELEASE

### **FibreSpan win LINK Interchange Network contract**

FibreSpan, Britain's premier affordable dark fibre solution provider, has today announced that it has supplied bespoke dark fibre connectivity to the operator of the LINK cash machine (ATM) network - the busiest shared ATM network in the world.

In addition to their high speed data requirements, the network will also meet the needs of the company's security monitoring infrastructure for a newly acquired location at its head office site. The fibre will handle real-time transmission of CCTV signals from multiple units across the remote site to the head office on the business park.

The solution was devised following FibreSpan's successful tender to provide dark fibre for high speed data services between the locations. FibreSpan identified the opportunity to install multi-mode fibre as an addition to standard single-mode dark fibre through its unique patent-pending microduct. The cost, resource and convenience rationalisation was significant for the company, enabling smooth construction of an all inclusive network.

LINK is another enterprise customer win for FibreSpan, reinforcing a shift seen in the marketplace as companies move away from traditional restricted bandwidth providers to dark fibre providers.

"LINK's selection of FibreSpan's unlimited bandwidth solution is an encouraging reflection of the change in attitude and shift away from the traditional service providers. Our aim is to make dark fibre solutions available to all industries," said Robert Bicket, CEO of FibreSpan.

**About FibreSpan** - [fibrespan.co.uk](http://fibrespan.co.uk)

FibreSpan is a fibre solutions company with a national telecommunications licence. It designs, installs, operates and leases private dark fibre circuits, working in partnership with health and education, local authorities and other multi-site organisations. Established in 2001, it is an independent UK national statutory utility, licensed by the DTI and regulated by Ofcom.

It is FibreSpan's goal to make fibre optic connectivity a viable solution for organisations throughout the UK. In order to achieve this the company has invested in developing patent-pending microduct technology that is swiftly changing the face of fibre optic deployment – allowing access to bespoke dark fibre connectivity at an affordable and competitive rate.

FibreSpan offer an end-to-end service that includes consultation, network planning, rapid deployment and comprehensive support. Its dark fibre networks offer unlimited bandwidth at a fixed cost for the term of the contract - a genuinely future proof solution. This puts FibreSpan in a unique position to enable clients to have complete control of future bandwidth demand.
