

## OpenSpan™ Dark Fibre Solutions

FibreSpan designs and builds bespoke dark fibre networks to provide a high-speed future proof bandwidth solution between enterprise locations. The OpenSpan™ Dark Fibre Solution combines affordable dark fibre connectivity with a fixed cost limitless bandwidth model that results in a genuinely future proof solution.

### Service Overview

OpenSpan™ provides dark fibre network services specifically designed to meet the requirements of the growing corporate network. With dedicated point-to-point network connectivity, OpenSpan™ securely connects multi-site enterprises within a metro area.

Dark fibre connectivity offers unlimited bandwidth, flexibility and scalability. Unlike traditional leased lines, the cost of OpenSpan™ connectivity remains constant regardless of bandwidth. Customers pay a fixed annual cost over the term of the contract whether they run a Megabit, Gigabit or Terabit circuit.

This means that customers have the freedom to control the speed of their network, deploy state of the art hardware, keep their own pace with technology and implement next generation high-bandwidth applications - when the time is right for them.

### Service Features

With its OpenSpan™ Dark Fibre Solution and GigaSpan™ Ethernet Connectivity Service, FibreSpan gives customers the flexibility to choose the best solution for their needs, for today and the future.

	GigaSpan™	OpenSpan™
Bandwidth	1 - 10 Gbps	Unlimited
Applications	Ethernet	Any
Single Mode	Yes	Yes
Multi Mode	No	Yes
Number of Fibre Pairs	1	Multiple
Contention	None	None
Dedicated Fibre	Yes	Yes
SLA	Yes	Yes
Dedicated Helpline	Yes	Yes
Presentation	Ethernet	Terminated Fibre
Coverage	All UK	All UK

*FibreSpan was established in 2001 to provide viable, cost effective and risk free dark fibre bandwidth solutions to organisations throughout the UK. With its patent-pending microduct technology FibreSpan is able to install fibre networks in far less time and at significantly lower cost than traditional methods. This means organisations can access bespoke dark fibre connectivity at an affordable and highly competitive rate.*
